

PROJECT DETAILS FOR FINAL SUBMISSION

Project Title: Over-Stimulus

...

Student's Full Name: Nattagun Pruettijarai (Nat)

Instructor's Full Name: Kannawat Limratepong

...

Course:
Design 3

Studio Brief Title:
A Home is Not a House

Short Project Description (100 words max.):

My project focuses on examining the impact of an overly abundant presence of stimuli within a household environment and how it disrupts the natural flow of human activities. By stimuli, I refer to elements such as excessive noise, clutter, overwhelming visuals, or the presence of competing technological devices, which often compete for attention and interfere with daily routines. This disruption not only hinders the seamless execution of tasks but also negatively impacts the psychological and emotional well-being of individuals.

Full Project Narrative/Text Description (300 words max.):

My project focuses on examining the impact of an overly abundant presence of stimuli within a household environment and how it disrupts the natural flow of human activities. By stimuli, I refer to elements such as excessive noise, clutter, overwhelming visuals, or the presence of competing technological devices, which often compete for attention and interfere with daily routines. This disruption not only hinders the seamless execution of tasks but also negatively impacts the psychological and emotional well-being of individuals.

As a result, the overall quality of the living experience diminishes, creating an environment that feels chaotic rather than harmonious. My work delves into identifying these stimuli, understanding their effects on household dynamics, and exploring ways to mitigate them. By fostering a balanced, more intentional living space, the goal is to enhance functionality, comfort, and the overall quality of life within the home. This project underscores the importance of mindful design and thoughtful curation of our living environments

To mitigate and utilize our surrounding stimuli effectively and to its fullest potential, I designed a series of system that work in unison. The composition of the house are reconstructed to suit the occupant's ideal domesticity. Whether they want a quite isolated room or a massive, relaxing experience, the system offers an innovative approach to everyone unique take on life.
