

This playground design, integrated into a building structure, draws strong inspiration from Italy's Casa Sperimentale, an avant-garde experiment in modular, expressive architecture from the 1960s. Known for its bold geometry and exposed frameworks, it paved the way for my own reimagining of experiential, playful spaces for all ages.

Growing up, I was drawn to environments that encouraged exploration. By bringing familiar outdoor playground features, like my favorite, the ball pit, into a modern, indoor setting, this project bridges nostalgic childhood memories with my passion for architecture. The indoor ball pit, enclosed in glass, invites both children and adults into carefree play, linking simplicity with creative energy.

Another element from my youth is the obstacle track, now reimagined as an elevated path winding through the building. It encourages movement, creativity, and interaction, seamlessly blending indoor and outdoor experiences. Alongside this, the indoor cinema reflects weekends spent watching movies with friends, now transformed into a cozy, communal viewing space with minimalist design.

Lastly, a pool table evokes my teenage years, adding a space for relaxed competition and social connection. Positioned near the activity zones, it bridges playful energy with leisure.

Altogether, this design, rooted in the spirit of Casa Sperimentale, celebrates modularity, memory, and play. It's a space where creativity and fun remain central, from childhood into adulthood.
