

PROJECT DETAILS FOR FINAL SUBMISSION

Project Title: Blaze Park

...

Student's Full Name: Amelie Davis

...

Instructor's Full Name: Will Hulbert

...

Course:

Architectural Design 4

Studio Brief Title: Fire

Short Project Description (100 words max.):

Blaze Park is a contemporary fire station located at the intersection of Charoenrat Road in Bangkok's Bang Kho Laem district. The design focuses on re-establishing the relationship between firefighters and the community, creating a visible, welcoming presence. By incorporating a rooftop park, the project offers a dynamic public space that fosters community engagement while providing essential emergency services. The station's architecture blends functionality with openness, symbolizing the vital role of firefighters in urban life. Blaze Park serves as both a civic landmark and a center for connection, promoting safety, community interaction, and well-being.

Full Project Narrative/Text Description (300 words max.):

Blaze Park is a transformative fire station design located in the heart of Bangkok's vibrant Bang Kho Laem district, at the intersection of Charoenrat Road. This project aims to re-establish and strengthen the connection between firefighters and the surrounding community, making their presence both visible and accessible. In a city where fire stations are often hidden behind utilitarian facades, Blaze Park seeks to redefine the role of the fire station by integrating it into the urban fabric as an active civic hub.

The design of Blaze Park revolves around transparency and openness. The building's dynamic architecture features large glass windows and open facades, allowing the fire station to become a part of everyday life in the district. This transparency not only symbolizes the trust between firefighters and the public but also fosters a sense of security and belonging. The fire station is designed to be approachable, with a public-friendly environment that encourages interaction between the community and the first responders.

One of the unique features of Blaze Park is its rooftop park, a green oasis that serves as both a recreational space and a platform for community engagement. The park is accessible to local residents, offering views of the city while providing a safe, quiet retreat above the bustling streets below. It also serves as a venue for events, meetings, and educational activities related to fire safety and community preparedness.

Blaze Park is more than just a fire station—it is a beacon of community engagement, safety, and environmental sustainability. By combining emergency services with public space, the project not only enhances the urban landscape but also strengthens the social fabric of Bangkok's Bang Kho Laem district, creating a space where people and firefighters can come together.
