

PROJECT DETAILS FOR FINAL SUBMISSION

Project Title: One For All

...

Student's Full Name: Sirawas Tanatatsupaset

...

Instructor's Full Name: Chutayaves Sinthuphan

...

Course:

Architectural Design 2

Studio Brief Title:

Urban Incubators

Short Project Description (100 words max.):

One For All aims to provide self-contained housing spaces for different types of people when Bangkok gets flooded. The building will also provide spaces that allow people to continue with their previous lifestyle, having a shopping mall, restaurants, co-working spaces, and parks. The garden on the rooftop will also allow people to be self-sufficient to a certain extent, allowing them to grow crops to make their own food.

Full Project Narrative/Text Description (300 words max.):

The Brief is called Bangkok Afloat which focuses on the future where Bangkok gets flooded. This brief leads students to think about how Bangkokians can adapt their life to the flooded Bangkok, and how infrastructure can support the situation. The Project "All For One" aims to create self-contained housing that can adapt to different situations especially when Bangkok, Thailand, gets flooded in the near future. As people have to adapt their way of living when it floods, people won't be able to use their car as a main way of transportation, and it might get harder to leave their homes to go out during flooding season. All For One doesn't only provide housing spaces for different types of people but also provides spaces that allow them to continue with their previous way of living throughout the different situations. The building provides spaces like co-working spaces, parks, and more to allow people to have their social life, as well as spaces like shopping malls, and restaurants. Another main aspect of the building is the garden on the rooftop, as people might not be able to leave their premises when it floods, having a garden that allows people to plant their crops to make food can contribute to being self-contained/self-sufficient.
