

ABSTRACT

This project revitalizes an inaply used apartment spot into one of the valuable and efficient tourist spots. At present, the site lacks adequate lighting and has moisture problems that have resulted in the formation of mold, thus making the site unattractive compared to the other sites. To confront these issues the renovation will create an external pavilion system around the constructed building made of polycarbonate material. These materials will let in natural light; therefore, creating a natural and welcoming look and feel, as well as boost energy conservation besides preventing condensation formation that leads to mold growth.

The design will also integrate measures of sustainability within order to sustain the facility for long term. The renovation will be done in a manner that the space will be useful and environmentally friendly for the visitors. These enhancements consist of earthwork and improvement of the site so they can be made more accessible to the public which would therefore promote tourism.

This project will bring new architecture with sustainability integrated with moisture-free activity area and with respect to the history of the site. The result will be a bright, comfortable space that can meet contemporary needs and save the surrounding area and which creates a single oriented pleasant atmosphere for visitors.

PHASE 1-2 DEVELOPMENT

PROS	CONS
The buildings were tall so the surroundings can be seen easily.	The entrance was dark, moldy and very humid.
Middle of the tourist attraction, across the potential of getting to be another tourist attraction is pretty high.	The sunlight gets dark very fast after 13.00 the environment will change from sunny to cloudy everyday.
Still remain of the local environment and preserve the memories of local appearance.	There is the carpenter household in front of the entrance which left the unused wood everywhere.

PAIN POINT
MOST COMMON COMPLAINS

5-8 years old	18-40 years old	60 years old
No space for them to play	Want tourist to visit	No exercise due to lack of space
Smelly Entrance	Smelly Entrance	Want tourist to visit

AXONOMETRIC

PLAN 1-3 FLOOR
