

Redesigning Silom Station: Where Urban Flow Meets Tranquility

Located at the intersection of Bangkok's vibrant Sathorn business district and the serene Lumpini Park, Silom Station holds a strategic position in the city's urban fabric. Yet, despite its importance, the station currently feels disconnected from its surroundings, lacking a clear identity and a welcoming atmosphere.

This project proposes a complete reimagining of Silom Station — transforming it into a vibrant, functional, and meaningful public space that strengthens its connection to the city while enhancing the daily experience of commuters.

A New Entrance: Inspired by Shelter and Serenity

The redesigned entrance draws inspiration from traditional Thai temples, known for their inviting and protective architecture. Blending this cultural reference with the gentle silhouette of a tent, the new structure offers a shaded, open-air space that shelters commuters from sun and rain, creating a calm, approachable transition into the busy station.

A small café nestled within this entrance area turns the station into more than just a point of transit. With shaded outdoor seating, it becomes a social hub — a place where people can pause, meet, or simply enjoy the atmosphere away from the traffic and rush.

Playful Light: Light Walls and Skylit Alcoves

Underground, a network of skylights and carefully placed alcoves introduces natural light deep into the station. These "light walls" soften the atmosphere, creating a sense of openness and comfort. The interplay between light and shadow guides movement and transforms the underground journey into a fluid, pleasant experience — making the descent from street to station more seamless and intuitive.

A Living Wall: Nature Meets Modularity

One of the central features of the redesign is a **vertical green wall** made of modular ceramic tiles. These tiles host a variety of climbing plants and flower pots, allowing for flexible arrangement throughout the station. The green wall brings life and nature into the heart of the infrastructure — improving air quality, cooling the space, and offering a vibrant, ever-changing aesthetic that evolves with the seasons.

A New Urban Identity

This redesign envisions Silom Station as more than a transit hub — it becomes a place of encounter, rest, and inspiration. By weaving together architecture, light, and nature, the project transforms the station into a gateway that reflects the energy of the city while offering moments of calm and connection.

Silom Station is redefined not just as a point of passage, but as a meaningful urban landmark — one that welcomes, protects, and inspires.
