

## **Bor Min Bor Mee Project Description**

The Bor Min Bor Mee project is a 9,300-square-meter mixed-use residential complex located in Polo Park, designed to improve the quality of life for construction workers and their families. As the main workforce shaping our urban environments, these workers often endure high living costs and inadequate housing in the heart of Bangkok. This project addresses their unique needs, creating a sustainable and affordable living environment that empowers its residents.

A key feature of the project is the production area, which provides masonry and carpentry workshops for workers to hone their skills, share knowledge, and improve their career prospects. This not only supports personal growth but also contributes to the maintenance and functionality of the complex itself.

Built on a modular timber grid system, the residential units are flexible and customizable, with adaptive furniture to maximize limited space. Shared kitchens and bathrooms reduce living costs while encouraging community interactions. A vibrant green wall along the expressway reduces noise and air pollution, adding greenery to the urban landscape and creating a healthier, more serene environment for residents.

At its core, the project features a multifunctional communal space that serves as a sports ground, event venue, and playground for children, providing safe and engaging areas for both leisure and community bonding.

Bor Min Bor Mee envisions laborer housing as a dynamic and resilient environment, integrating affordability, skill-building, and ecological design. It offers a blueprint for creating livable, sustainable communities in dense urban settings, elevating the well-being of workers who are essential to the growth of our cities.
